Regional Observation Series

SCOPE

Field collection and normalization

Observations were recorded at North Coast, Estuary, and Harbor sites using a shared field sheet and synchronized instrument clocks. Temperature, salinity, and turbidity values are reported in the units declared by the dataset metadata.

QUALITY ASSURANCE

Review before publication

Each record was checked for identifier uniqueness, valid dates, permitted region labels, expected measurement ranges, and unit consistency. CSV and JSON deliveries are generated from the same ordered record collection.

REUSE

Stable fields and provenance

The record identifier, observation date, region, and three measurement columns form the stable public schema. Consumers should retain the dataset title, schema version, unit map, and this methods supplement alongside derived results.

Regional Observation Series

DICTIONARY

Published variables

record_id	Stable Research Archive observation identifier
date	Observation date in ISO 8601 calendar format
region	Controlled site label: north-coast, estuary, or harbor
temperature_c	Water temperature in degrees Celsius
salinity_psu	Salinity in practical salinity units
turbidity_ntu	Turbidity in nephelometric turbidity units
